

# Starter Edition

Start now – upgrade when needed

No long projects, no big investments:

# Picturepark® Starter Edition

Picturepark is the central platform for digital communication material. Pictures, graphics, presentations, videos and any other media assets can be managed in Picturepark and exchanged in a controlled environment. The system is accessed by web browser via the internet – at any time and from anywhere.

## Find assets quickly

Files in Picturepark are stored in categories. Each so called media asset is stored only once in the system but can be referenced in different categories. A keyword search enables to find Media Assets quickly. In order to refind and

select assets easily Picturepark visualizes a wide variety of file formats. Additionally, pictures are automatically converted into other formats and sizes, e.g. for Powerpoint.

## Distribution of data

Assets may be collected in a shopping cart and then processed in series. They can be downloaded as a ZIP archive, stored in a personal folder or sent directly to the desired recipient through a mailing: the recipient then receives an e-mail from the sender with a link to the assets which have been made available in Picturepark. He can make a selection and download the required files easily.

**«Picturepark helps us to save time. The intuitive interface makes it very easy for everyone to use. Especially, the shopping cart function and the sending of the images via an email link have convinced us.»**

**Mahmut Randa, Productmarketing, Somfy GmbH**

## Scale Starter Edition

- One ReadWrite-User
- Unlimited ReadOnly-User
- Rights management
- Three download formats
- Exchange of pictures by e-mail
- Order workflow
- Visualisation of images
